Re: Colorado Carbon Project
Date: November 2, 2009

Audubon Lifestyles is a non-profit organization founded upon the International Sustainability Council's Principles for Sustainability, and believes that the most natural way to foster sustainability is by working to balance the triple bottom line of people, profit, and planet. Operating with the main purpose of benefiting society, Audubon Lifestyles delivers sustainable programming, services, and certifications that are cost effective and that reduce risk.

The Audubon Lifestyles Sustainable Golf Facility Program is a program in which we hope to evaluate the total sustainability of a golf facility. A sustainable golf facility is an economically sound business that provides safe, healthy, and enjoyable environments for all employees, members, visitors, and guests, and is sited, designed, and constructed in ways that enhance the local community, and reduce or eliminate its impact on natural resources. A sustainable golf facility is managed in ways that provide balance between optimum playing conditions for golfers, and good stewardship of the natural environment. Management strategies are based upon scientifically sound site specific best practices that improve the quality of all life on the site, regionally, and beyond. Through outreach and education a sustainable golf facility is a champion and advocate of sustainability.

We believe that the undertakings associated with the Colorado Carbon Project can play an important role in helping to not only better understand the carbon footprint of golf facilities, but also to promote best practices, help to drive change, and offer a new solution for golf facilities that desire to be more sustainable.

The Colorado Carbon Project is an exciting undertaking that we feel compliments our own mission and vision, and the efforts associated with the Audubon Lifestyles Sustainable Golf Facility Program. We are pleased to see a growing list of individuals and organizations that are becoming engaged in the Colorado Carbon Project, and would like to extend our wholehearted support for your efforts.

Developing a carbon emissions and carbon sequestration data collection system, documenting the carbon sequestered at participating golf courses, and focusing on fully understanding the total carbon dynamics of golf facilities is a crucial step towards understanding the environmental values/costs associated with golf facilities, and will undoubtedly help to shape the golf industry of the future.

Please consider Audubon Lifestyles, Inc. a strong supporter of the Colorado Carbon Project. We anticipate great successes from your efforts, and look forward to hearing about the outcomes in the near future. If you need our assistance in any way please don't hesitate to call upon us.

R. Eric Dodson,
President and CEO
